KeyInCloud

Commercial Properties

Commercial properties are using smart locks to:

- Manage access remotely
- Vendor access management
- Create schedules
- Manage multiple locations
- Add/delete users
- Notifications via text or email

Multiple designs, flexible solutions.

BUSINESS LOCKS

Business locks are built to sustain the highly active use of a business property. They can be used indoors and at covered entryways.

WiFi

Z-WAVE

COMMERCIAL LOCKS

Commercial locks are ideal for outside entries and are built to handle heavy use. Get the ease of control of a smart lock and support commercial-level traffic.

1) Controlled access for all types of entry.

Hardware Agnostic

Provide access credentials for use on keypads or card readers with electric strikes, proximity key fobs, and wireless smart locks that are located on indoor and outdoor entryways. Experience the flexibility to add components that are specific to each building's infrastructure.

Warehouse Doors and Outdoor Gates

Manage loading dock bays and outdoor gates to create a sustained and secure flow of deliveries and vendor arrivals and departures.

Parking Garage Management

Link a user code, key fob or keycard to garage access and building entry points. When garage doors are outfitted with smart lock systems, property managers can integrate garage entry points into the ACS solution to monitor and control building access.

2) Power management and battery life.

Control from the cloud, simplified.
